

# Hashed Password Generation in Wesnoth

(May 26, 2010) The following overview shows how [multiplayer.cpp](#), with the help of [hash.cpp](#), constructs hashed password *"opFPx5Js9Y8XT038tS0jW."* when it's given salt *"\$H\$9eCZoV4ty73190437"* and password *"testpass"*. Note that the overview includes two do-while loops. Non-printable characters have been changed to three underscores ("\_\_\_"), but the signed integers show their actual values. I, Norbert, created this overview because a test case enables me to more easily determine which parts of wesirc 0.1 are working properly and which are not, and what changes my C code need.

-----

```
[open_connection] salt is >$H$9eCZoV4ty73190437< and password is >testpass<
[open_connection] get_salt(salt) returns >eCZoV4ty<
[get_iteration_count] returns >11<
[create_hash] before shift left iteration_count is >11<
[create_hash] after shift left iteration_count is >2048<
